

The screenshot displays an online Python IDE interface. The top bar is blue with the 'ONLINE PYTHON' logo and links for 'Learn Python' and 'Try New IDE'. Below the bar is a toolbar with icons for file operations and a 'Run' button. The main editor area shows a Python script named 'main.py' with the following code:

```
1 starting_location = input("Enter starting location: ")
2 destination = input("Enter destination: ")
3 mode_of_transport = input("Enter mode of transport: ")
4
5 distance = float(input("Enter distance (in kilometers): "))
6 speed = float(input("Enter speed (in km/h): "))
7
8 travel_time = distance / speed
9 is_long_trip = travel_time > 5
10
11 print("\n--- Travel Details ---")
12 print(f"Starting Location: {starting_location}")
13 print(f"Destination: {destination}")
14 print(f"Mode of Transport: {mode_of_transport}")
15 print(f"Distance: {distance} km")
16 print(f"Speed: {speed} km/h")
17 print(f"Estimated Travel Time: {travel_time:.2f} hours")
18
19- if is_long_trip:
20     print("Warning: The trip will take more than 5 hours.")
21     print("Rest stop is recommended.")
22- else:
23     print("No rest stop needed.")
```

The right-hand side of the IDE shows the 'TERMINAL' output, which matches the program's execution with the following input and output:

```
Enter starting location: taguig
Enter destination: alabang
Enter mode of transport: bus
Enter distance (in kilometers): 18
Enter speed (in km/h): 40
>
--- Travel Details ---
Starting Location: taguig
Destination: alabang
Mode of Transport: bus
Distance: 18.0 km
Speed: 40.0 km/h
Estimated Travel Time: 0.45 hours
No rest stop needed.

** Process exited - Return Code: 0 **
```
